General Homework comments

Refactoring

- You already have a program X which does x,y,z once.
- Now you need to do x,y,z several times, with a slight modification for a
- Options:
 - 1 Start from scratch
 - 2 Copy X to a new file, modify it, and call it Y
 - 3 Write a wrapper around X , and modify X so it can be used with the slight modification, but also still works as originally intended
